## FIRE & SECURITY

ADVANCED SYSTEMS TO PROTECT  
PROPERTY, PEOPLE AND STOCK

## Welcome to MTM Fire & Security

MTM Fire & Security is centrally based with offices in Kent and Birmingham, offering nationwide coverage.

MTM design to specification a wide range of superior Fire & Security solutions, from project management to installation and maintenance of:

- integrated systems
- Fire alarms
- Intruder alarms
- CCTV
- Access control
- Automated gates and barriers
- Door entry systems
- Automated lighting systems

Once installation is complete, MTM provide:

- Full product training and technical manuals
- Certificate of conformity and compliance with the British Standard as approved by the SSAIB
- After sales service
- 24-hour emergency service

### Client Overview

MTM Fire & Security have a large and varied database of clientele from:

- *Multi-national worldwide companies*

## Complete Solutions

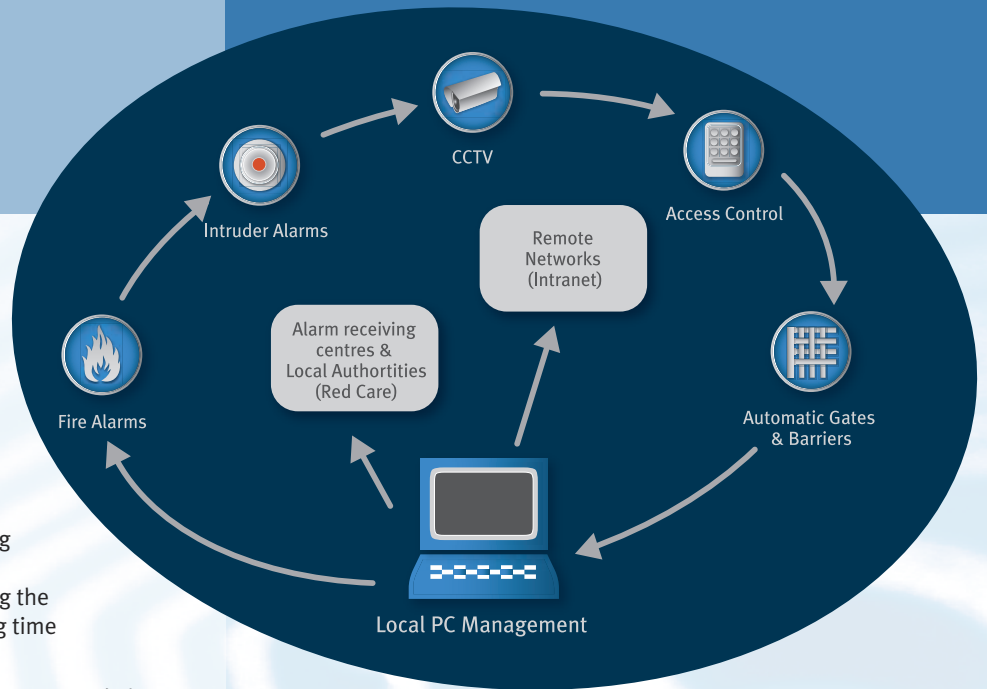

MTM provide a complete Fire & Security solution:

### Integrated systems

Security systems management are the nerve centre of most buildings access control.

The use of micro-processor based systems and software technology using a Windows environment, has resulted in an operator friendly system requiring the minimum of operational input, creating time and labour savings.

Reports of events and data printing of access and alarm inputs ensure effective security management. The linking of CCTV enables video footage at points of entry and fire alarm point identification, as well as fire master reports giving fast, effective results. MTM Fire & Security provide fully integrated systems designed to meet the requirements of each project.

*Protecting tourist centres*

**Your MTM Consultant:**

Integrated systems

Fire alarms

Intruder alarms

CCTV

Access control

Automatic lighting systems

Automated gates & Barriers

Service & Maintenance

## Fire alarms

MTM Fire & Security design, install and maintain automatic fire detection systems both non-addressable and addressable. Addressable systems are ideally suited to larger installations, as a fire alarm activation can be pinpointed to a single device, with an exact location being displayed on the LCD display. MTM have completed contracts with systems having in excess of 200 devices utilising state-of-the-art self aligning optical beams.

We recommend the use of BT GSM Redcare to transmit fire signals to MTM's alarm receiving centre (ARC).

## Intruder alarms

MTM provide a full range of high quality detection equipment and warning devices, both perimeter i.e. IR beam towers, guard wire and internal intruder alarms, designed for the protection of people, stock and premises.

In the event of an alarm condition, an audible and visual warning will be initiated together with, if required, an electronic signal transmission to the ARC.

On verification of the alarm signal the ARC will alert the appropriate authorities and keyholders.

All MTM systems are constructed to your specific requirements by our highly experienced consultants. MTM are approved and recommended installers of **MENVIER, SCANTRONIC** and **PYRONIX**.

MTM are a **SSAIB** registered installer and maintainer. You can be assured of a quality system installed to the current British Standard.

## CCTV

MTM Fire & Security are specialists in the design, specification and installation of high performance digital CCTV systems.

From the installation of single camera systems to multi-camera installations, MTM's expert team will provide your solution. MTM have completed contracts with systems in excess of 60 cameras, protecting multi-million pound stocks.

Systems can be designed to operate in conjunction with an intruder alarm for visual verification of an alarm event by pan and tilt cameras patrolling the point of intrusion.

For local and worldwide viewing, MTM recommend networking to your computer system.

## Access Control

MTM Fire & Security design, install and maintain access control systems, from single door to multi-door computer controlled management systems. Designs are intended to give authorised visitors and employees freedom of movement within specified areas, whilst keeping out unwanted callers.

Access control systems utilise audible, visual and coded identification with either magnetic strip, Weigand/proximity cards or biometric fingerprint reading devices.

Automatic turnstiles are supplied and installed for the control of people traffic.
